

Ink Container Clean-up/Storage

1
Select your ink from the shelf. If you notice excess ink around the base/on the shelf, please take a moment to wipe both the shelf and the bottom of the container.

2
If you're struggling with the lid, please gently use the pry bar to lift the lid up. Don't press in against the container as you might dent it.

3
Go forth and print!

After printing, be sure to wipe down the container and the lip of the container. Excess ink on the lid will cause the container to stick and will make it difficult for the next person to open.

4
Don't forget to wipe down the lip on the top of the lid as well!

5
Add a thin coat of vaseline to the lid of the container. Vaseline can be found on the shelf above the water-soluble inks.

6
Put the ink back in its designated spot, and you're golden!
