

## Papermaking Studio Clean up

- Please help keep the studio clean and organized for others.
  
- There should be NO fiber left anywhere including vats, moulds, deckles, sieves, mesh, beaters, felts and vats.
  
- Squeegee the tables to remove pulp and wipe off stainless steel countertop.
  
- Lift up the lid (Reina and Rebecca beaters) and spray around the roll to remove trapped fiber. For the Valley Beater, spray around the roll to remove any fiber. Fill up the beaters with water, turn on to clean out the fiber, and drain the water. Repeat several times until all the pulp is gone.
  
- Clean the insides of the vats with a scrubbie and Soft Scrub, Restore the Earth, and Clorox spray (if there is dye in the vat).
  
- Hose down floors using push brooms and use spray nozzle to clean all the fiber from the floor.
  
- Clean floor drain and mesh and clean the sink drain mesh.
  - please report if any drains are clogged to Facilities using the QR code.
  
- Clean your work area and put away tools.
  
- Close the window.
  
- Turn off the hoses and hang them back up.
  
- Turn on all fans so the floor can dry out.
